World's Best Drywall Lifts™
PANELLIFT USA
 Brand®

MODEL 439

The leader in the industry

Since 1973

Telpro has been providing you, the rental industry, with the world's best drywall lifts on the market. Over the years, the PANELLIFT® Drywall Lift has lifted millions of sheets of drywall to the ceiling. We have adapted the machine to make it work better for both the drywaller and the rental industry. In the past, you have asked for improvements and we delivered. As when we changed the frame mounting connections to make the machine faster and easier to assemble and disassemble. We are continuously working hard to provide premium equipment that safely and reliably handles the harsh environments subjected by rental customers.

Change is good.

At the 2007 ARA rental show we were proud to introduce just that unit. The PANELLIFT® Model 439 was received with overwhelming acceptance by those that came by our booth. Many of these customers are converting their stock over to these low maintenance chain drive units. This new patent pending unit does what other drywall lifts only dream of doing.

Still innovative.

The *chain drive technologies*, used for years in our professional drywall lifts, is now coupled with a manual winch and *torque limiter*. The Model 439 will reach heights of 14'5" and still load at the low height of just 35 inches. This means that you will no

longer need extensions to reach 95% of the lids. If you need to go higher - you can add the model 154 (18 inch) Extension to reach almost 16 feet; making the PANELLIFT® Model 439 the

highest reaching lift in the industry. Now you no longer need to stock extra lifts for those higher reaches. The *heavy-duty chains* mean that you will never have to replace brass sheaves or cables again. Damaged lifts from overloading is a thing of the past and customer safety is increased. The *two-way overload preventing torque limiter* means that your renter will not be able to use this machine on loads that are unsafe or not designed for the PANELLIFT®.

The tripod is also equipped with *new 6 inch casters* making the 439 much easier to roll over obstacles on the floor. The 439 can still be used on walls or for ducts just like our

other units. Reduce loading drywall to just inches off the floor by adding the optional *Loading Attachment* - your customers will love you for it and continue to come back!

Will it last?

Our machines out perform any other lift out there, that is why drywallers ask for the PANELLIFT® by name. Drywall lifts aren't an add-on product line for us - they're our specialty. We build them for people who expect their equipment to last. We're not the cheapest and we never hope to be. We do, however, strive to build the very best drywall lifts in the world. In the end - quality always costs less.

In addition to a quality tool, your customers also benefit from superior customer service. We provide to your customer our 1-800 number. Over the years, we have walked thousands of your customers through the how to's of using the PANELLIFT®. Our track record proves the PANELLIFT® is a reliable brand. We have machines that are still in use after 15 to 20 years in rental and have produced over 3000% return on their investment. We will still continue to make and provide parts for our industry standard 138-2. We're convinced that the new 439 will revolutionize the rental industry yet again - We feel so strongly that we are

backing the drive train with a *3 year warranty* for the rental industry.

So if *Quality, Longevity, High ROI, Safety, and Customer Satisfaction* are what you value - we encourage you to wait no longer and upgrade your drywall lifts to the new PANELLIFT® Model 439.
